R. A. Stohr

In reply to your questions contained in your memo of April 22nd on FDA's proposed PCB tolerances and the Wisconsin Fisheries Association: 1) no action is planned by Monsanto. 2) No action should be taken as we have no new data or old to confirm or refute the present and proposed PCB tolerances stated by the FDA for various foods. 3) I would not reply to Ms Johnson. The data we have is a matter of public record which is available from the EPA or FDA. 4) I agree we should contact Dr. Allen about his latest "findings" and I suggest this be handled by you or Paul Wright.

I have not heard anything from either you or Dr. Roush in trying to get Mobil's confirmation that their epidemiology studies on PCBs was in error. Would you please follow up.

George, in the future, if someone calls on PCBs, it might be easier to refer them to me.

J. Coleman Weber
