R N WHEELER JR.

Dear Mr. Whitted:

We have been asked to write you regarding heavy metal content of our non-solvent vinyl resin QYNL.

We do not routinely conduct analyses of our resins for heavy metals. However, our products are manufactured under controlled conditions designed to minimize metal contamination. Thus, we are confident that they do not contain harmful amounts of these materials. We have examined random samples typical of the non-solvent polymerized vinyl resins we produce, and these results* are given as follows:

Chromium	0.7 ppm
Copper	0.05 ppm
Lead	0.37 ppm
Manganese	0.33 ppm
Nickel	0.30 ppm

*Average of nine blends.

Very truly yours,

W B Ackart
