Q For the most part.

And you told the jury that asbestos is a toxic substance which, I guess, no one can argue with you about that.

But wasn't it true in the 1960s that the medical community and experts thought it was nontoxic or was not toxic at all?

MR. SHELLENBERGER: Objection.

THE COURT: Overruled.

A Well, I would have to go back and look at what the literature said at that stage. I can't -- I don't really recall specifically what people thought was toxic and nontoxic in the '60s.

Since he discovered -- I mean, there are cases of asbestosis discovered in the '30s and cancers in the '50s and '60s.

I can't believe that they would think it was nontoxic when it was causing all of these diseases.

Q You have heard a man by the name of Gerrit Schepers, haven't you?

A Sure.
