DATA FOR VCSA MEETING

The attached sheet has been filled out per your request for the VCSA meeting.

1. We're interested in the Chloride Stress Cracking topic. Has this problem occurred in any clad SS equipment or only in solid SS equipment?
2. Question from the floor -- How many PVC manufacturers have gas holders to capture emergency vent emissions? What are the pros and cons?
3. Anything new on the California regulation on .01 PPM vs. the fence line?
4. How do PVC manufacturers handle their solid waste sludge? Is it considered a hazardous substance in most states and therefore requiring a hazardous waste landfill? Has anyone conducted leaching tests?
