epidemiology and biostatistics, control of vector hazards, things like insects that cause disease and things, air pollution and occupational health.

Q After your work at the University of Washington, you got a Master's degree in occupational health from the University of California, Los Angeles?

A Yes.

Q And what did that involve?

A That involved a year and a half of study and writing a thesis. The thesis was actually on chemical analysis method for dust in the air.

Q And one dust in the air which you have worked with over the years is asbestos?

A That is correct, yes.

Q You got your doctoral degree from the University of California at Berkeley in 1981; is that correct?

A Yes, sir.

Q What field was that?

A That was -- environmental health sciences
