say it was questionable how you used it. It was a good product as far as heat was concerned.

Q But it was a product that you knew could create a lot of dust and could possibly cause people to get sick?

A Right, sure.

BY MR. McGOWAN:

Q And did you continue to have that belief throughout the 1950s?

A Well, now, '50s, where was I?

Q You were in New York.

A Yeah, I had no occasion to. I don't think fundamental feelings changed one bit, but I had no information that showed one way or another what happened. But people inhaled it and it never occurred to me that they would go into the use of Kaylo without proper tests.

Q So does it frankly -- is it disappointing to you, Mr. Thomas, here we are in 1991 and for the first time in 1991 you are learning about this animal study that was done in the '40s on Kaylo and no one ever
