PLAINTIFF'S EXHIBIT

MON-2552

In order to evaluate respirator cartridge service life, the following information is needed on the attached form:

- 1) Cartridge Respirator brands used at your location
- 2) Cartridge type used
- 3) - Chemicals for which respirators are used

Please return the form to Tom Blank - G2WB no later than August 15, 1984. When information is not available from the manufacturer, in-house evaluation is needed in order to select proper protection.

The information you provide will help to prioritize compounds for such testing. I have identified AN and HMD as prime candidates. If you feel strongly that testing should be done for a particular compound, please indicate with an asterisk on the attached form.

Thanks for your help.

S. D. Paul
