Thanks for the operating data sheets on the Anniston Porocell Column. I have developed proposed design data for the new Porocell Columns based on this. Please review these and try to include with the comments due 8/30/68.

The assumption here is that your electrical quality results at 5 GPM are fully acceptable, and that feed temperature is the most important variable.

I have only one copy of WGK's Porocell Column Drawing and have attached it to your copy.

R. W. Peterson
Project Manager
