Dear Joe:

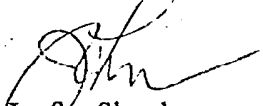

The Clayton reports on dust from joint compound operations were well done, but I found it difficult to see the pattern of the data at a glance.

I have prepared a summary of the data for our company management. I feel it might be useful to the Special Committee on joint compounds in its discussions or in its report to the Board of Directors, and have enclosed a copy for you.

Kaiser Gypsum Company has long been labelling all its asbestos-containing products in accordance with OSHA regulations and the recommendations made by the Special Committee on August 15, 1973. We would like to see further response from the committee members on both the asbestos label and the additional caution.

Very truly yours,

KAISER GYPSUM COMPANY, INC.
