

MEETING AT LARRY WEESE'S OFFICE

MAY 17, 1990 @ 10:00 AM

SUBJECT: Asbestos brakes and asbestos cylinders
and Pot Grating Personal Sampling

Larry Weese, Mike Messile, Jeff Berder, and myself discussed the problems with asbestos brakes. It was recommended that environmental acquire a MSDS sheet for each storeroom brake lining. Establish which storeroom brake liners are asbestos and which are not.

Next discussion concerned asbestos cylinder gaskets. It was recommended that a jig be designed and constructed whereby the removal of asbestos gaskets be performed under water. The water would be placed into a 55 gallon drum. The asbestos would be filtered out of the water on a regular basis. The asbestos would be disposed of by a Asbestos Abatement Contractor.

The Pot Grating Personal Sampling results were discussed with the effected employee. The report was shown to him that said that he was not exposed to any excessive welding fumes or metals. The employee was told that a request was submitted to sample his workplace two more times.
