

PITTSBURGH CORNING CORPORATION

March 19, 1971

Mr. Charles R. Stewart, Representative
 Port of Galveston
 370 Lexington Avenue
 New York, New York 10017

NOTE: THIS DOCUMENT DID
 NOT COME FROM PPG FILES

Dear Chuck:

During our last conversation you had requested as much information as possible concerning shipments into the Port of Galveston from Africa. In this regard, we submit the following:

"Solon Turman" - Due to sail March 9th to the 11th
 250 Metric Tons D11
 245 Metric Tons D3
 22 Metric Tons M

"Elizabeth Lykes" - Due to sail March 17th
 110 Metric Tons D11
 67 Metric Tons M

Amosite Fiber inventory levels at the Oventown, Texas plant (just outside of Tyler) will be very low by the time the "Solon Turman" arrives; therefore, expeditious handling of the first 6 to 8 cars would be greatly appreciated by us. We do not mean for this statement to be taken as a complaint regarding previous handlings of incoming material as that has been good. However, the situation with the shortage of Amosite Fiber at the plant means that we here at Pittsburgh Corning must watch the material movement very, very closely and any additional help that you or your people can provide will be greatly appreciated.

Yours very truly,

Lee P. Hauser
 Manager of Production Planning
