

Tug boats operate in brackish, often polluted waters that offer special problems in ship paint maintenance. Taylor and Anderson Towing & Lighterage Co., a marine towing service operating out of the Port of Philadelphia, therefore, protects its entire fleet of tug boats with dependable red lead primers. From keel to superstructure, each ship in the fleet wins its tug of war with corrosion thanks to red lead primers.

Time proved red lead offers maximum protection from water and corrosion at minimal cost. Important to busy scheduled services such as Taylor and An-

derson is the fact that a maintenance work program can be planned because of red lead's proven performance characteristics. What's more, required surface preparation is minimal. No other protective primer offers all these advantages.

Find out what red lead based paint systems can do for you. Write today for a copy of Lead Pigments Technical Letter No. 15 that describes surface preparation methods and gives recommended formulas for the protection of various types of steel structures.
