TO Mr. W. A. Kuhn

General Offices

These photos taken July 25, 1968, show progress over past five working days.

Photo 1: looks southeast showing lights installed in the Warehouse. The left side of the Warehouse steel is gray (first coat) and appears slightly lighter in color than the red prime coat on the right. The gondola car in the foreground had just been emptied of the roof and siding panels for the warehouse structure.

Photo 2: looks north from ground level in front of Building 28. Painting progress is discernible, as is progress on structural steel for the flaker pent house. Also visible in the warehouse structure at the left is the newly installed Aroclor flaker feed tank (only the western tank for Biphenyl had been installed when last week's photos were taken).

Photos 3 and 4: show the Warehouse and Tank Farm respectively, viewed from the third floor of Building 28.
