3-4-47	Proctor's lot	A	45 min. holding time results in pulled off sinkheads. When they show hot tops against mold to loosen pulled off sinkheads.	called to daily attention.
3-4-47	Assembly coming apart -	A.	Kennedy called GAF about tops pulling apart. I went down a foundry assembly that had parted. showed cracks on the bolts were shaved. a hot and a top were sloppy in the threads of this bottom # 708. a miss again 708. The small dia. of the tapped hole checked 1 7/8" against 1 1/2" in properly tapped holes. Check internal space a several casting to be re. lined without finding any more large threads. Doll marked "check" on the top and bottoms a Lestly was told to check new bottoms & over assembling that were apart for through top a find any questionable ones. GAF will take up with Lima.	This was checked again on 8/14. Could find only 708 & 709 with loose threads done as BFA. Lestly a Wilson millwright foreman will check as they assemble new bottoms from shipment of 5-18-47 & report. 8/4
