MAREMONT PRODUCT ENGINEERING DEPARTMENT ENGINEERING BULLETIN		Bulletin No. 333
Product: All Products		Supplement No.
Subject: Procedure for Request for Screening and Part Number Assignment		Date September 30, 1966
Reference:		Page 1 of 1
		Superseding No.

PURPOSE:

To establish guidelines and requirements necessary to properly identify components requiring Maremont Part Number Assignment.

SCOPE:

All part number assignment requests must have the following information submitted for review by Engineering:

- A. Original Equipment Number
- B. Major Supplier's Number of equivalent item for maintenance of Comparative Guides
- C. Application of part number to be assigned (Sales Number)
- D. Product Line
- E. Class Code

Note: Submittal of an Original Equipment Number only is not sufficient information for part number assignment and it is required that these number assignment requests have comparative equivalents of one or more major supplier's number. When Original Equipment Number reference is not available, such as in Water Pumps and Fuel Pumps, it will be necessary to use the major supplier's number such as Master Products and/or Warner as basis for part number assignment.

CONCLUSION:

The requirements set forth in this bulletin are necessary and extremely important to preclude duplication of part number assignment. It should also be noted that Maremont part number assignment will be required for components of products listed on our Blue Sheet Price List only. "Red Tag" and custom remanufactured items do not require Maremont part number assignment since there is no volume purchasing requirement or inventory maintained.
