Dear Herb:

In my letter of April 8 concerning the polychlorinated biphenyls and specifically our Aroclors 1242, 1254 and 1260, I indicated that we had received only verbal reports from Dr. Calandra concerning the histopathology of animals which had been sacrificed.

Enclosed are copies of the written reports on the chronic rat studies showing the data for the animals through nine months of feeding and the results of the histopathological examination of the rats sacrificed after six months.

Best personal regards.

Sincerely,

R. Emmet Kelly, M. D.
Medical Director
