FUELOIL & OIL HEAT

... Serving the fueloil-oilheating and air conditioning industry.

- Fueloil
- Oilheating Equipment
- Oilheating Service
- Accessory Equipment
- Fueloil Handling Equipment
- Air conditioning Equipment Sales and Service

Now in its 43rd year of publication; is edited for all fueloil-oilheating and air conditioning men. Covers installing and servicing of all oilheating and air conditioning equipment, selling and merchandising from the dealer level. Technical articles, exclusive market reports on oilheating, airconditioning and fueloil, and fueloil handling. The regular monthly Commercial-Industrial Section covers installing and servicing of heavy oilheating equipment, boilers, large capacity oil-fired air movers and heavy fueloil. Member of Audit Bureau of Circulation. Published monthly. One year \$4.00—3 years \$7.00

ELECTRIC HEAT and Airconditioning

... Dedicated to the advancement of Complete Electric Comfort

- Electric Heating Equipment
- Electric Heating Accessory Equipment
- Airconditioning Equipment
- Insulation

A magazine devoted to comfort heating with electricity. Covers both residential and commercial applications. Electric heating is coming fast, particularly in areas where the airconditioning load has given the electric utilities a very large peak summer load. When this peak presents a non-profit imbalance, the utilities create comfort heating rates and push hard for electric heating to build a winter load. It has zone control possibilities. In most areas insulation is recommended to make electric heating competitive. ELECTRIC HEAT and Airconditioning covers all phases of this growing industry including heat pumps. No engineer in heating and airconditioning should ignore this new art. This publication is 100 percent devoted to electric heating and airconditioning. Member of the Business Publications Audit of Circulation. One year \$4.00—3 years \$7.00.

Write to Heating Publishers for list of books on heating and airconditioning.

International Heating & Air-Conditioning Exposition

Permanent Address—200 Park Ave., New York, N.Y. 10017

EXPOSITIONS HELD

Chicago, 1965; New York, 1963; Chicago, 1961; Philadelphia, 1959; Chicago, 1957; Philadelphia, 1955; Chicago, 1953; Philadelphia, 1951; Chicago, 1949; New York, 1948; Cleveland, 1947-1940; New York, 1938; Chicago, 1936; New York, 1934; Cleveland, 1932; Philadelphia, 1930.

FUTURE SCHEDULE

18th International Heating & Air-Conditioning Exposition—Cobo Hall, Detroit, Jan. 30-Feb. 2, 1967.

SPONSORED BY THE MEMBERSHIP OF ASHRAE

These biennial Expositions are held coincident with the semi-annual meetings of American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., and under their auspices. Management is by International Exposition Company with permanent headquarters at 200 Park Ave., New York, N.Y. 10017

EXHIBITORS

Comprise leading firms in each phase of the industry; number has varied from 150 to more than 500 exhibitors.

EXHIBITS

These comprise all types of products discussed or advertised in this copy of THE ASHRAE GUIDE & DATA BOOK, including industrial, commercial and domestic applications.

1. The COMBUSTION Group:

Furnaces, burners (coal, oil and gas), grates, stokers, boilers, radiators (various types), refractories and auxiliaries.

2. The OIL BURNER Group:

3. The HYDRAULIC Group:

Water feeders, water heaters, pumps, traps, valves, piping, fittings, expansion joints, pipe hangers, etc.

4. The STEAM HEATING Group:

Vapor heating, steam specialties.

5. The HOT WATER HEATING Group:

6. The AIR Group:

Warm Air furnaces, registers and grilles, cooling towers, air filters, motors, fans, blowers, conditioning equipment, ventilators (room and industrial types), unit heaters, etc.

7. The ELECTRIC HEAT Group:

8. The AIR CONDITIONING Group:

Equipment which circulates and filters the air, in summer dehumidifies and cools; in winter heats and humidifies, and does all these in proper season for complete, all year-round air conditioning.

9. The CONTROL Group:

Instruments of precision for indicating, controlling or recording temperature, pressure, volume, time, flow, draft or any other function to be measured.

10. The REFRIGERATING Group:

Compressors, condensers, cooling apparatus, contingent apparatus and refrigerants.

11. The CENTRAL HEATING Group:

Apparatus and materials especially designed or adapted to the uses of central heating and central heating station supplies.

12. The INSULATING Group:

Structural insulators (refractory and cellulose materials), asbestos, magnesia clays and combinations thereof, pipe and conduit covering, etc., weather-stripping, adhesives, etc.

13. The MISCELLANEOUS Group:

Boiler and pipe repair alloys, liquids and compounds, tools of all kinds, and equipment not specifically included in the above groups, but related thereto.

14. The MACHINERY AND GENERAL EQUIPMENT Group:

15. BOOKS AND PUBLICATIONS

VISITOR ATTENDANCE

Attendance is by invitation and registration only, thereby presenting a selected audience. Included are engineers, contractors, dealers, jobbers, supply houses, industrial users, professional and service organizations, public utilities, real estate management concerns, etc. A detailed analysis of registered attendance is available on request.

Industrial Expositions in America lead the expositions of the world in style, business effectiveness, industrial influence and educational value. This Exposition stands among the leaders in Industrial Expositions in America. It is an educational institution which brings together the research developments and improvements in equipment and materials for use in heating, refrigerating, ventilating and air conditioning all types of buildings.
