SUBJECT: Summary of Chest
X-Ray Results
1971-1975CC: H.A. Brown
J.W. Wolter
E.D. Lovick - LibbyPERSONAL & CONFIDENTIAL

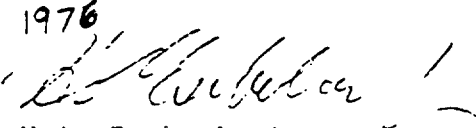

During my visit last week, Earl Lovick and I made a brief summary of the results of our annual chest X-Ray screening. We hope that this will give us a rough barometer to gauge our progress in controlling fibrosis at Libby. The results are distressing but there may be an indication that we have reached the peak. Specifically, the number of employees with five years service who have problems is declining. I hope that this trend will be reflected in those with over 10 years service in the future. Earl will provide a summary of 1975 results shortly.

Five years or more service:

<u>Year</u>	<u>Percent with Lung Abnormalities</u>
1971	54%
1972	50%
1973	46%
1974	49%
1975	41%

Ten years or more service:

1971	53%
1972	59%
1973	59%
1974	64%
1975	63%
1976	55%
