Mr. Frank Warren
Senior Safety Engineer
State of California
Dept. of Industrial Relations
Division of Industrial Safety
2550 Mariposa St., Room 4065
Fresno, California 93721

Dear Mr. Warren:

As required in your Accident Prevention Report of 11-30-71, the tagging operator has been provided, and is required to wear, an air supplied hood unit while performing the duties of his job. The other operator, in the palletizer area, has been supplied with a 21-B rated cartridge type respirator. The two operators are rotated during the shift so that neither operator spends full time in the cartridge respirator.

Our company Industrial Hygienest, Mr. P. W. McDaniels, has checked the air supplied hood unit under operating conditions and has determined that the hood internal atmosphere is less than TLV.

Very truly yours,

Floyd H. Larrison, Jr.
Manager, King City Operations
