ASBESTINE • CERAMITALC • INTERNATIONAL FIBRE • MOULDENE

January 5, 1972

United States Gypsum Co.
1000 E. N. W. Highway
Des Plaines, Ill. 60016

Attention: Mr. Carl Roch

Gentlemen:

Recently you inquired regarding our product MOULDENE.

We referred your questions to our laboratory. Their answers are, as follows:

1) The fibre content in "MOULDENE" is a combination of both fibrous and granular materials. The question of exact percentages of each type material has never arisen before and, consequently, has not been determined.

2) The fibrous portion of "MOULDENE" is composed largely of the mineral anthophyllite.

If there is any further information you wish, please let us know.

Yours very truly,

INTERNATIONAL TALC CO. INC.

P. F. McCarthy
