months in 1950, he was exposed to dust created by the handling, use and application of a product known as Kaylo, Kaylo pipecovering.

It was manufactured by Owens-Illinois, and it was used on jobsites by pipecoverers in his vicinity, and cut and sawed in his vicinity creating asbestos-containing dust.

I want you to further assume that the product contained 13 to 25 percent asbestos, amosite and chrysotile, and that Mr. Vandergucht inhaled the dust that was created from the use of that product.

Assuming those facts to be true, Doctor, do you have an opinion, to a reasonable degree of medical certainty, as to which, if any, exposures to that Kaylo pipecovering were substantial contributing factors to the development of Mr. Vandergucht's diffuse malignant peritoneal mesothelioma?

MS. TOSTANOSKI: Objection.

THE COURT: Overruled.

A Yes, sir. It is my opinion that all of those exposures contributed to the development of this
