CONTENTS FOR NOVEMBER, 1940

VOLUME 37

NUMBER 11

How to Get Defense Housing Business	19
The Sun as an Aid to Heating	23
Air Conditioning Kleinhans Music Hall	24
Dust Control with Low Resistance Systems — Part 2	27
Heating System for Santa Monica Apartments	30
Wall Heat Loss Back of Radiators	32
A Fallacy About Poison Gas	33
Heating Equipment at Power Show	34
Profits in Air — International Business Machines	35
Profits in Air — Kollsman Instrument Company	36
Effect of Draft on Stoker Operations	37
Profits in Air — Heald Machine Company	38
Air Distribution in Industrial Ventilation	39
Electric Heat for Boston's New Concertorium	43
Lowered Fuel Costs from Stoker Installation	44
Current Problems in Wall Condensation	46
Grumman Aircraft Erecting "Black-Out" Plant	47
How to Determine Size and Cost of Freon Lines	48
Test Chamber Simulates Stratosphere Conditions	52
Radiator Heat Research Program	53
Summer Degree-Hours for 1940	54
Corrosion Inhibitors for Air Conditioning	55
Blowers in U.S. Mosquito Fleet	57
Number of Degree-Days for September, 1940	58
Reference Data, 185 and 186	58
Abstracts	59
News of the Month	62
New Equipment	70
New Trade Literature	74
With the Manufacturers	75
Coming Events	76

They're as Different as Your **HUMIDITY CONTROL PROBLEMS**

"LOOK AT THE WHOLE SYSTEM" is the *Johnson* thought behind the selection of exactly the proper type of "humidostat" for each individual humidity control installation. In solving automatic temperature and air conditioning control problems, always in the minds of *Johnson* engineers is the indisputable fact that even the most efficient devices are valuable only when they function perfectly as part of the whole . . . Almost every installation differs as to the relative humidity to be maintained and the dry-bulb temperature with which that humidity is associated. Various materials, which respond dependably to changes in the moisture content of the surrounding air, are affected differently under each set of conditions. That is why *Johnson* offers "humidostats" with any one of several types of elements, such as animal membrane, human hair, wood in various forms, and other substances . . . Ask for bulletins describing *Johnson* room and insertion type "humidostats." There is no obligation. A post card will bring them. JOHNSON SERVICE COMPANY, Milwaukee, Wis., and Direct Branches in Principal Cities.

Automatic TEMPERATURE AND AIR CONDITIONING *Control*

INDUSTRIAL HEALTH HAZARDS

In designing ventilating systems for various types of industrial plants the problem sometimes arises in an engineer's office of determining, frequently at a distance, just what types of dust, fumes or odors might be encountered in a specific industry. It is to assist in this problem that this data sheet has been designed. The information covers a somewhat wider scope than ventilation alone in that it deals with all industrial health hazards, including infections, pressure abnormalities, high light intensities, radioactive compounds, and a few other hazards not directly associated with ventilation. On the whole, though, most of the hazards are those which are concerned, at least to some extent, with industrial ventilation.

Due to space limitations the information has been presented in the form of two tables. To use the table refer to Table 2 and opposite

the type of industry find the number or numbers of hazards involved in that particular industry. The numbers are keyed to the hazard in Table 1.

Example: What type of hazard would be encountered in an electrotyping plant?

Solution: Referring to Table 2, opposite Electrotyping will be found the numbers 6-49-64. In Table 1 opposite 6 is found acids; opposite 49, lead and compounds; and opposite 64, plating solutions. All of these hazards are liable to be found in an electrotyping plant and the engineer can determine in advance or at a distance the probable need for ventilation.

This data sheet is a rearrangement of data presented through the courtesy of the Connecticut State Department of Health which issued this information in a large check list entitled "Potential Industrial Health Hazards."

Table 1—Potential Industrial Health Hazards

(Numbers are keyed to Table 2.)

(IN THE LISTINGS BELOW, NOC INDICATES NOT OTHERWISE CLASSIFIED)

1 Abnormalities of Pressure	27 Dust (Asbestos)	54 Methanol
2 Abnormal Temperatures and Humidities	28 Dust (Free Silica)	55 Methyl Chloride
3 Acetaldehyde	29 Dust (Inorganic)	56 Noise
4 Acetone	30 Dust (Metals, Metalloids, etc.)	57 Nitrobenzene
5 Acetylene	31 Dust (Organic)	58 Nitrogen Oxides
6 Acids	32 Dyes and Inks	59 Nitro and Amino Compounds
7 Acrolein	33 Ethyl Ether	60 Oils (Mineral, Paraffin, Cutting, etc.)
8 Alcohols (NOC)	34 Ethylene Dichloride	61 Paints and Lacquers
9 Alkalies	35 Ethylene Trichloride	62 Phenol
10 Ammonia	36 Excessive Dampness	63 Phosphorus and Compounds
11 Aniline	37 Fatigue	64 Plating Solutions (NOC)
12 Anthrax	38 Fluorine and Compounds	65 Poisonous Plants
13 Antimony and Compounds	39 Foodstuffs	66 Radioactive Compounds
14 Arsenic and Compounds	40 Formaldehyde	67 Rubber Accelerators
15 Benzol	41 Friction and Tension	68 Silver and Compounds
16 Bromine and Compounds	42 Fumigants and Insecticides	69 Soap Solutions, Glue, etc.
17 Cadmium and Compounds	43 Hairdressing Preparations	70 Solvents (NOC)
18 Carbon Dioxide	44 Halides	71 Sulfur Chloride
19 Carbon Disulfide	45 Hydrogen Sulfide	72 Sulfur Dioxide
20 Carbon Monoxide	46 Illuminating Defects	73 Synthetic Resins
21 Carbon Tetrachloride	47 Illuminating Gas	74 Tar and Allied Substances
22 Chlorine	48 Infections	75 Tetrachloroethane
23 Chloroform	49 Lead and Compounds	76 Toluol
24 Chloronaphthalene	50 Light Intensities	77 Turpentine
25 Chromium and Compounds	51 Manganese and Compounds	78 Xylol
26 Cyanides	52 Mechanical Irritations	79 Zinc and Compounds
	53 Mercury and Compounds

¹Plants making product not composed exclusively of wood, metal, or celluloid.

²Where product is made from sheet aluminum excluding rolling or smelting operations.

³Including the salvage or junking of parts.

⁴Where the materials are of slight toxicity.

⁵Where the toxic materials spread into the room air.

⁶Where the toxic materials are within completely enclosed spaces.

⁷All kinds of contracting.

⁸Including medicine and pharmaceutical preparations but not including the manufacturing of the ingredients.

⁹All operations.

¹⁰Including manufacturing involving explosives in any way.

¹¹Including spraying.

¹²Excluding hatters' fur.

¹³Including rendering and incineration.

¹⁴Excepting straw or cloth hats.

¹⁵Professional or scientific instruments.

¹⁶Including old metal and rag sorting.

¹⁷Sheet, pipe, and shot, excluding smelting.

¹⁸Including forging but excluding foundry operations.

¹⁹Including publishing, lithographing and allied industry.

²⁰Including bleaching and dyeing but not cleaning and dyeing.
