Attention: Dr. Harry Agahigian

Dear Harry:

Supplementing our conversation on the subject of PCB analysis, I am submitting herewith five (5) water samples from our Bridgeport capacitor plant for that purpose. As a matter of information and for the record, these samples consist of:

- 1) Incoming water (grab sample from a tap) to our Bridgeport, Ct. plant on January 28.
- 2) Effluent cooling water (composite of 8 samples taken at hourly intervals) from our Bridgeport, Ct. plant on January 28.
- 3) Same as 2, on January 29.
- 4) Effluent sanitary water (composite of 8 samples taken at hourly intervals) from our Bridgeport, Ct. plant on January 28.
- 5) Same as 4, on January 29.

These samples were taken by representatives of EPA (Region 1) and are duplicates of samples which EPA will analyze in their own facilities, and of samples which we are sending to another independent laboratory for analysis. Analysis results will be exchanged between ourselves and EPA.

Naturally, I am anxious to obtain results of your analysis as soon as possible, although of course not at the expense of accuracy.

Very truly yours,

N. Ray Clark, Vice President
