Mr. J. J. Lavelle
E. I. duPont de Nemours & Company
Wilmington 98, Delaware

Dear Mr. Lavelle:

Your letter of February 17 requesting safe handling procedures for our fire resistant fluids Therminol FR-2 and Therminol 77 have been referred to me for reply.

I have enclosed a sheet discussing Therminol FR-2.

On the basis of animal toxicity studies carried out to date Therminol 77 appears to be physiologically inert under the usual conditions of handling and usage in an enclosed system.

I have taken the liberty of sending the reports of animal toxicity studies to Dr. John Zapp at your company's Haskell Laboratory.

If I can be of any further assistance, please let me know.

Very truly yours,

Elmer P. Wheeler
Manager, Environmental Health
Medical Department
