subject Monitoring for Asbestos Dust

date July 2, 1974

Because of the prospects of eliminating asbestos from our joint systems products, the program for division-wide training of asbestos dust monitoring is being postponed. After the first of next year, we will review our dust problems to determine if such a program will be necessary.

Ed

In the meantime, those locations requiring asbestos dust tests should schedule them as we have in the past for compliance with federal regulations on dust monitoring.

Jim
