Q-926

Mr. J. Marino called - reference literature release on asbestos substitute insulation product. Wanted to know propriety of statement on envelope that product met OSHA regulations.

I said that such a statement cannot be made because while we have NIOSH approval on regarding the product as a nuisance dust, such dusts still maybe harmful if exposure is too severe. Suggested also that any such statement as that proposed would have to be cleared by Bill McCreery.

Mr. Marino decided to leave statement off envelope.

Mr. G. Brown called - reference tank venting (normal and emergency). He is checking acceptability of tank and reactor venting throughout Brooklyn plant. Has venting requirements slide rule which gives him data on sizes required. Wonder what OSHA specifies. Gave him reference from 1910.

George would like a copy of the new 1910.
