November 1992

IN THE AIRMAILS

Most of you received Mr. Sexton's letter of February 13, 1976 and Mr. Elliott's letter of February 20, 1976 outlining the seriousness of a problem dealing OSHA requirements on asbestos. This has led to an agreement by Messrs. Heller, Marcum and Winer that Development Engineering should organize and coordinate the necessary work to find substitutes for all LRA applications that use asbestos containing materials.

Mr. C. R. Ruffing has been assigned this task and will be spending approximately 80% of his time for at least the next 6 months working on these problems.

Attached you will find a detailed program put together by Mr. Ruffing. In order to carry this out it will be necessary for the managers of all involved sections or departments to assign someone to work with Mr. Ruffing to the extent indicated in his program.

Would each of the managers involved please contact Mr. Ruffing, by March 12, 1976 indicating who will be assigned to the project.

91-2000, 3/6/76
J. C. Botts, Manager
Insulation Development
