connection with litigation?

A That's right.

Q It wasn't a study designed to see whether we could come up with a better protocol for treating cancer?

A No, but of course this work is going to be relied upon when the time comes when we choose to regulate chromium in water.

Q Sure. I understand. But that's an indirect benefit to society?

A In this case it was an indirect benefit.

Q All right. And you've written about the difference between direct and indirect benefits to individuals and its relation to what level of risk we're willing to accept as a society?

A Voluntary and involuntary is what you're referring to I think.

Q I was going to get to that, but you've also written about direct and indirect, have you not.

A Perhaps. I don't recall. I may have. I've written quite a bit.

Q Okay. And you talk about that in your writings, about how we as a society look at risk and what is and what is not acceptable?

A That is a different issue and I talked about
