

Dr. B. H. Hildreth,
363 S. Arlington St.,
Akron, Ohio.

My dear Mr. Hildreth:

I am sending you herewith a report on the findings in the urine and faeces in the case of your patient, Mr. [REDACTED]. The lead found in the two samples provided is well within the limits of normal individuals. Consequently it gives us no information as to any excessive exposure to lead which Mr. Ritenour may have had. As a matter of fact the lead in both the urine and faeces is in smaller quantities than that which is usually found in normal individuals who are not engaged in any lead occupation.

I wrote you a little while ago for some further information about Mr. [REDACTED] but I can well understand that you are a busy man and have had little opportunity to comply with my request. If you do find it possible one of these days to let me have some further information about him, I should appreciate it very much indeed.

Cordially yours,

RAK:EJ
