

LEAD INDUSTRIES ASSOCIATION

422 UNIVERSITY AVENUE

NEW YORK 17, N.Y.

NATIONAL LEAD PRODUCTS DIVISION

August 15, 1946

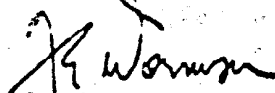

MEMORANDUM

To Members of the Metallic Lead Products Division:

We are attaching Chemical Bulletin No. 1, which is the first of a series of bulletins on the use of lead and corrosion materials in the construction of chemical equipment. These bulletins will be based on personal plant studies by the Association's chemical engineer, Herbert A. Church, Jr. They are intended to provide members with as complete information as possible about the performance of lead and other materials in contact with a wide variety of chemicals under various operating conditions.

We will appreciate your comments and suggestions for the improvement of these bulletins to the end that they will be most useful to members in the sale of lead products.

Very truly yours,

 Secretary.
