The asbestos products that still need replacement are the NF-127 and NF-276 low coefficient linings for VC, caliper, and centrifugal clutches; the NF-316 high coefficient CT material for Standun, the Abex 438x23 standard coefficient for centrifugal clutches, the Abex 693-551 standard coefficient for one large size E application, and the NF-251 standard coefficient CB application for Washex. The replacement for the NF-127 and NF-276 may come as a result of Navy development testing, which will leave mainly special application materials that need replacement.

If the next month of testing is successful, we can eliminate most of our asbestos products this year.
