Dr. H. W. Jackson
National Dairy Research and Development Division
861 Waukegan Road
Glenview, Illinois

Dear Dr. Jackson:

Mr. Dunne of our Chicago office has requested the Medical Department to forward toxicity data for our products, the Aroclors.

Although we have limited toxicity screening data on several of the compounds making up this series, chronic toxicity information on only two, Aroclors 1242 and 1254. Although the experiments conducted on these two compounds relate to the effects of Aroclor vapors if inhaled, it is our opinion that the systemic injury exhibited by the animals at higher dosage levels represents the type of injury which would result from chronic ingestion of effective doses.

If you will write me directly as to your specific interest and indicate the exact Aroclors, perhaps we can provide additional information.

Very truly yours,

Elmer P. Wheeler
Assistant Director
Medical Department
