I thought that was a little strange. I would have thought the plaintiffs would have wanted to talk to him about his own work and they didn't.

I don't know why that is so, it is so, but in any event, let's see what Dr. Dement has to say about forsterite or forsterization.

First of all, you can see the study was done at the U.S. Public Health Service, survey Cincinnati municipal garage, and the date was March 16, 1972.

The author was John Dement, and it was done for NIOSH which is who he was employed by at that time.

Then we have this abstract down here which says exactly what was studied. It says air samples were taken during automobile brake service operations.

So they were monitoring while brake linings were being changed.

And they tested for a lot of things and then the study goes on to say this:

Although most brake linings contain 20 to 70
