Maya, for attribution, if needed, to U.S. EPA, please:

For answers to the first part of your inquiry, please see the attached fact sheet. For the following paragraph:

Most cleaning agents contain VOCs. To minimize exposure, look for the Environmental Protection Agency's "Design for the Environment" "Safer Choice" label. This recognizes the products that meet stringent criteria and are the least harmful in their class.

Hope this helps.

Thanks, R.

I have one more item I need to run by you from Real Simple magazine. Deadline is also noon today if possible

When this story ran in 2014 we mentioned the EPA's "Design for the Environment" label for cleaning products. I think this text needs to be updated to reflect your new label. Can you confirm that the following is correct?

Most cleaning agents contain VOCs. To minimize exposure, look for the Environmental Protection Agency's "Design for the

Environment” “Safer Choice” label. This recognizes the products that are the least harmful in their class.

Maya, if we have a response later today, you'll hear from me. If we need until tomorrow, you'll hear from Robert Daguillard, copied here.

Thanks,
Enesta

Fantastic! Thanks for the quick response! My deadline is tomorrow at noon.

I am working on updating a story (for a Real Simple (book) that we ran in 2014 about pollution in the home. This is what we said in 2014 but upon some digging, I wonder if we should just cut this whole section? Does new furniture even contain flame retardants? Please note—none of this info is being credited to the EPA, I just want to find out if this info is even relevant any more and what the current regulations are regarding flame retardants and home furnishings.

CURRENT TEXT (from 2014): Many sofas, drapes, rugs, and pressed-wood items are coated with flame retardants to prevent fires. But besides irritating the respiratory tract and causing headaches and fatigue, chronic exposure to these chemicals has been shown to affect liver, kidney, and brain function over time. Even when the “new couch” smell from chemicals emitted from the upholstery disappears, the fumes are still there. You just don't notice them. Chemical-free furnishings are slowly becoming more common at retailers and specialty shops (like eklahome.com)[NOTE: THIS STORE IS OUT OF BUSINESS NOW]. Beginning in January 2015, couches sold in California will have to meet new flammability standards that are designed to reduce flame-retardant chemicals in furniture. Experts hope that this will lead to more affordable nontoxic options nationwide.

Real Simple magazine
Importance: High

Hello EPA Media Team:

I'm a reporter with Real Simple magazine. I was wondering if you'd be able to help put me in touch with the right person at the EPA who can help me distill the current regulations on chemicals (flame retardants) in furniture? I'm on deadline and am hoping to get in touch with someone today or tomorrow.
Many thanks!!

Maya Kukes
