Confirming several phone conversations with you, I want to get Victopac from Plant 4 cut to size for further manufacture. We've tried buying sheets to stock levels, laying them out and cutting as required, but we end up with lists of odd ball sizes for which we have no further use. These you have taken back. . . . some at full value, some at less than full value. There are some for which even you have no further use. The outlet for Victopac is the Soft Gasket Plant, so let's return to that premise in our ordering.

If on occasion you are bottle necked in the area of shearing capacity, we can arrange for you to send us the number of sheets required to yield the number of pieces ordered. We can square shear and return the ends to you on a lot by lot basis. The necessary accounting and counter charges can be worked out to accommodate this.

We've been kicking this around for some time now; let's put a target date on getting the mechanics set up so that we can be operative under this concept by July 1. I'm certain it will enable us to establish more accurate costs on our Victopac 300 gaskets.
