

WE are intrigued with this night photograph of the semi-outdoor Hawthorn Station of Kansas City Power & Light Company. All the more do we like it because it shows a couple of Elliott outdoor splashproof (weather-protected) motors driving forced- and induced-draft fans. The 250-hp motor driving the forced-draft fan is not too easy to make out at the left, but plainly shown at the right is the 600-hp motor on the induced-draft fan. This station was written up in the Summer 1952 issue of *Powerfax*. When the fourth unit is completed in 1955, the \$50,000,000 Hawthorn Station, named after Missouri's state flower, will represent one of the largest single private investments in the history of Kansas City.
