Attn: Biennial Reports

Sirs:

Attached is our Georgia Biennial Hazardous Waste Report for 1985 under our present status of "Small Quantity Generator".

We actually generate only 2 to 3 pounds of "Floor Sweepings" daily in this "Warehouse" operation. This amounts to a monthly total of less than 100 pounds a month which should revise our status from S.Q.G. to NHD (Non-Handler of Hazardous Waste) and are requesting this modification via this letter.

There was some talk during an inspection of our facility by your Department in 1984 about removing us from the listing as a Generator. We thought this had been done but find no letter of verification in our files.

Our sweepings may contain low levels of asbestos, lead, formaldehyde and phenol. All sweepings are bagged in plastic and labeled as asbestos bearing. The bags are then sent to the landfill with our regular trash.

We are anxious to resolve this matter and look forward to your favorable reply.

If further information is needed or you have a question, please contact me at this location.

Sincerely,

Joyce Neal
Warehouse Co-ordinator
