

CREW HUDDLE OUTLINE

Business decision

Leader: As designated.

Participants: All hourly employees on all crews in PVC (including maintenance, T & M and lab support employees); possibly crew on at the time in other areas.

- Outline:
- A. A business decision has been made to shut down all of the #85 building production operations. Assuming all goes well, this will happen on or about June 30, 1973. If we run into unexpected production difficulties, it could be earlier than that.
 - B. #92 building is to be shut down at the same time and, contingent upon project approval, revisions will be made to convert #92 building to barrier resin (Lopac) production. These revisions will be extensive and will take about 1 year to complete.
 - C. Current plans are that #84 and #88 buildings will continue to operate for 3 and 2 years respectively, providing all goes well. The total output from these buildings will be sold to a single customer, which is the Borden Co. This arrangement will begin in the next few days.
 - D. Employees affected will be handled in accord with the contract.
 - E. We need to do our best to operate all the PVC operations effectively for the remaining time. We need to show those who make the decisions about locating new Monsanto business that Springfield is a good place to do business.

ANNOUNCEMENT

It has been announced that all #85 Building operations will be shut down on or about June 30, 1973. #92 Building operations will be shut down at the same time. In #92 Building, it is possible that activities will begin shortly after the shut-down to convert #92 Building to the production of barrier resin (Lopac). Current plans call for the operation of #88 and #84 buildings for 2 and 3 years respectively.
