RE: ASBESTOS DUST TEST AT BLDG. 54E

A dust test was taken on December 4, 1972 at Bldg. 54E while John Manville Brand Superex Block insulation was being cut. The employee was weaving the sampler while cutting the Hi-Temp block. Sampling period was 48.5 minutes.

Some of the dust was visible on the filter so two slides were prepared, one as is, and the other one with the surface dust knocked off. The results are shown below.

SAMPLE	TIME	COUNT	CONCENTRATION
As is	48.5 min.	first	3.53 fibers/ml
		second	3.31
Dust knocked off	48.5 min.	first	4.74 fibers/ml
		second	4.66

Fibers are difficult to count when there is a lot of material on the slide.

RE: ASBESTOS DUST TESTS

Two tests were run in Refining during December for asbestos fibers. One in the storeroom and the other one at R-31.

In both tests the employee doing the work was wearing the sampler. Results are shown below.

ACTIVITY	AREA	TIME Min.	CONCENTRATION Fibers/ml
Using power sweeper to sweep aisles where asbestos materials are stored	Storeroom	32	0.1925
Tying asbestos pipe insulation to liquor line	R-31	30	0.29

RE: ASBESTOS DUST TESTS

Three tests were run at the Marinite Shop for asbestos fibers during January.

In all tests, the employee was wearing a face mask and the sampler.

Results are below:

ACTIVITY	TIME Min.	CONCENTRATION FIBERS/Ml
Cleaning out small dustkop collector with shovel	4	13.17
Digging out trough from Casting	6	1.38
Cleaning up floor after working on trough	17	0.47*

*Millapore filter holder accidentally slipped off hose and dropped on floor. Some sample was lost.

RE: MARINITE DUST TESTS

There are four pieces of equipment that are connected to the Pangborn dust collector through different diameter ducts by way of a rotating valve. The valve has limiting switches that do not allow a particular piece of equipment to run unless it is connected to the dust collector.

On September 19, 1973 the band saw, enclosed table and router were tested. The following day the table saw was tested.

An asbestos fiber test was also run on the outlet of the collector while testing the band saw. Static pressure readings were also taken every fifteen minutes during the testing on the inlet and clean air side of the bags to determine the pressure drop across the bags. It never reached the 4" W.C. drop that was desired. Results below:

Equipment	INLET ACFM	INLET Gr/Cu Ft	INLET Lbs/Hr	OUTLET ACFM	OUTLET Gr/Cu Ft	OUTLET Lbs/Hr	Maximum Pressure Drop
Band Saw	3166	0.139	3.78	3179	.0004	.012	1.2" W.C.
Enclosed Table	4097	0.0178	0.63	3655	0	0	1.7"
Router	3496	0.68	20.36	3252	.0004	.010	1.5"
Table Saw	2673	0.592	13.56	2256	.0002	.0046	0.6"

ASBESTOS FIBER TEST

Counter	Time	Fibers/ml	Time Weighted Avg.
