The Clidden Company has pioneered in the use of soybean oil in the manufacture of Paints, Oil Colors, and Synthetic Enamel.

In the Clidden laboratories, research work has shown that the particular value of soybean oil in paint making is that it yellows less rapidly than other oils, also that it produces an extremely waterproof finish. After three years of exposure tests made at the University of Illinois, W. L. Burdette writes: "Soybean oil paint is holding up in excellent shape." "The University of Illinois is now making liberal use of Soybean Paint."

In order to provide soybean oil of the right quality for its manufacturing uses, The Clidden Company has erected in Chicago a soybean oil extracting plant which extracts oil from 8,000 bushels of soybeans per day, an annual capacity of 2,464,000 bushels.

In addition to using this high quality extracted soybean oil in the manufacture of its own products, The Clidden Company supplies soybean oil to manufacturers of linoleum and floor covering materials.

As new uses are being constantly developed for soybean oil, The Clidden Company believes that the growing of soybeans is going to develop into a profitable industry for the American farmer.
