WHEN TO SELL AND BUY

PCB's Get Committee Treatment. A new interagency task force has been set up to study the PCB problem. New group will be guided by the Office of Science and Technology and Council on Environmental Quality. USDA is represented, along with other agencies. They will have two major objectives: to insure maximum coordination between agencies to prevent specific incidents from occurring, such as the fish meal contamination that occurred in the Southeast, and to institute studies to determine the health effects of long-term, low level exposure to PCB's.

It doesn't look like we'll have a massive search to uncover any and all products that may be carrying residues but will see an increased emphasis on preventing contamination of feeds or foods through leakage of the material.
