RE: Correction to VCM Release Report
of 2/15/84

Dear Mr. Coerver:

On February 15, 1984, a letter was submitted to your office concerning a release of 25 lbs. of VCM on 2/15/84 from a VCM loading operation. Due to a closer examination of the incident a recalculation of the quantity released was made. This recalculation was based on eyewitness accounts of the size of the pile of ice that was on the ground shortly after the incident. The current estimate of the amount of VCM released is 1400 lbs.

If you should have any questions please contact J. E. Wyche at (318) 491-4830.

Respectfully,

A handwritten signature in dark ink, appearing to read 'Philip S. Trew', written over the typed name.
