ENGINEERING BULLETIN #177

C A U T I O N

PLICAST AIRLITE

PLICAST AIRLITE contains asbestos fibers. There has been a definite association established between asbestos and lung cancer. For this reason, a number of companies have prohibited or severely restricted the use of asbestos containing materials. There also have been restrictions placed upon the spraying of asbestos containing materials. PLICAST AIRLITE is formulated for troweling or pouring application and is not to be pneumatically applied or sprayed.

The workmen mixing the PLICAST AIRLITE should wear a mask that will prevent the inhalation of dust from the mix.

We hope to eliminate the asbestos from the PLICAST AIRLITE formula in the near future.
