Subject: Technical Coverage for August 1987 CCG Turnaround

On shift coverage for the unit shutdown is not recommended. Since this period conflicts with S. C. Harrity's marriage, absent 8/21/87 - 9/1/87, assistance as needed for the unit shutdown will be provided by C. H. Barron with backup by T. F. Stus. G. M. Jones and V. D. Rogers will provide support as needed for Gas Fractionation and Gas Treaters.

Technical coverage of the CO furnace decoking will be provided by C. H. Barron on days, 7-7, and by G. M. Jones on nights, 7-7.

Technical assurance during the maintenance phase will be provided by the TSO's with support from C. H. Barron and as needed assistance from HOPE, D. S. Bunnell, R. A. York and L. E. Stein.

Technical coverage for the R and R startup will begin with catalyst loading into the regenerator and continue until stable unit operations are achieved as agreed by Operations. C. H. Barron will work days, 7-7, and S. C. Harrity will work nights, 7-7.

Full coverage for Gas Fractionation and Gas Treaters startup is not recommended. G. M. Jones and V. D. Rogers will work their normal schedule with extra hours, weekends, or adjusted work hours as needed for problem situations. C. H. Barron or T. F. Stus will cover any gaps in these areas as needed.

Please discuss any questions that you have about this plan with us.
