December 18, 1972

To: Mr. Paul E. Toth, Supervisor
Industrial Hygiene Section
Employe Health Services Department

Subject: Environmental Exposure to Airborne Asbestos Fibers

The OSHA Standard for Exposure to Asbestos Dust became effective on July 7, 1972. This standard requires monitoring of employes potentially exposed to asbestos fibers.

On November 8, 1972 all Parts Distribution Centers were requested to report to Plant Engineering any questionable operations or a negative report. Please be advised all Centers reported negative with the exception of two; National and Cleveland. We are forwarding a copy of their replies for your information and file.

J. E. Meroz, Supervisor
Plant Engineering
Engineering Planning Section
Supply and Distribution Planning Department
