A Yes, he would.

Q In fact, I think you testified before that you had never been on a clean plastering job; would that be accurate?

A That would be true.

Q Now, I want to talk to you a little bit about the spraying process.

Would you take the spray and dump it into a hopper?

A No, the mixer first, then dump it into the hopper and wet mix.

Q You put it into the mixer first and transfer it from the mixer to the hopper?

A Yes.

Q How would you actually apply the spray to the building?

A Well, it was pumped through a hose and it would come to the end of your hose, and then you have an air line hooked into your gun that, when it pumped out the end, the air created the spray that you wanted to spray.
