THE VERDICT

Dutch Boy White Lead has proved its case

It was to be expected that paint made with Dutch Boy should prove to be beautiful, economical and practical for this Newark Court Room just as it has been for hundreds of other jobs all over the country.

For years, building managers and owners have known that paint made with Dutch Boy White Lead and Flatting Oil gives a durable washable surface with a satiny richness that enhances an interior's attractiveness.

The pigment in this paint—white lead—remains insoluble in water... does not change chemically... does not wash off and leave streaks. Thus, even after long service, paint made with Dutch Boy White Lead and Flatting Oil can still be safely

washed... repeatedly... with soap and water.

Dutch Boy White Lead is the ideal paint material for every type of surface... every kind of finish. Interior wall paint... undercoatings for enamel... any one of a thousand tints... flat, egg-shell and gloss finishes... durable, economical paint for wood, plaster, wall board or metal... all these can be had with Dutch Boy. It is also widely used to secure modern, blended and mottled effects and the plastic paint now used where low-relief textures are required to serve a decorative requirement.

It pays to standardize on Dutch Boy White Lead for all your painting jobs. Greater convenience and appreciable economies will surely follow. Send to nearest branch for booklet—“Decorative Possibilities of Paint”.
