Dear [REDACTED]

Please find attached two documents for your information. In summary the documents are:

- Phys-chem studies on EEA-NH4 – this reports has the latest water solubility and partition coefficient results on EEA-NH4. This study was part of the phys-chem properties studies we initiated to address inconsistencies in our EEA-NH4 REACH registration that were noted by the EA (we were already aware of them and knew we need to address these). The plan is to update the EU-REACH registration in H1 2022 and this data will be made public as part of that process.
- Ecospan summary report – this provides a brief summary of the hydrodynamic modelling, direct toxicity assessment and ecological survey and concludes that effluent discharge from Hillhouse is not having a significant effect within the Wyre estuary.

Please let me know if you wish to discuss the contents or wish to share these document beyond the EA. On this occasion we have not marked either as confidential although we would not want them in general circulation.

With kind regards,

[REDACTED]
