Limit On Eating Fish Urged

ST. PAUL, Minn. (AP) — Consumption of fish taken from Lake Pepin should be limited to one meal a week according to the Minnesota Health Department, because of a high concentration of an industrial chemical known as PCBs. The department issued the warning Wednesday concerning game fish. Earlier the U.S. Food and Drug Administration had halted the shipment of carp taken from Lake Pepin because some were found to contain 14 parts per million of polychlorinated biphyenyls (PCBs), which exceeds the U.S. FDA maximum of five parts per million in fish.
