Subject: Asbestos Nonproduction Materials Utilization Survey
Michigan Casting Center

REF: Your Letter Dated May 7, 1980, Same Subject

In a previous letter to you we had reported that a survey was conducted to locate possible asbestos ingredience in both nonproduction and production materials purchased by this plant. The result was negative.

The survey consisted of a personal search of our supply storage areas to read product lables followed by interviews with foreman and stores personnel in each area. One General Foreman informed us that a phase out of asbestos materials had started over Two years ago at this plant and the assignment is now considered completed.

Our roofing materials for repair have been applied by several contractors in the past and we have no record of the products applied.
